Versatile System

AquaCell units are the smart solution to the effective management of surface water.

Consisting of only a few simple components this versatile system can be used for both infiltration and attenuation purposes.

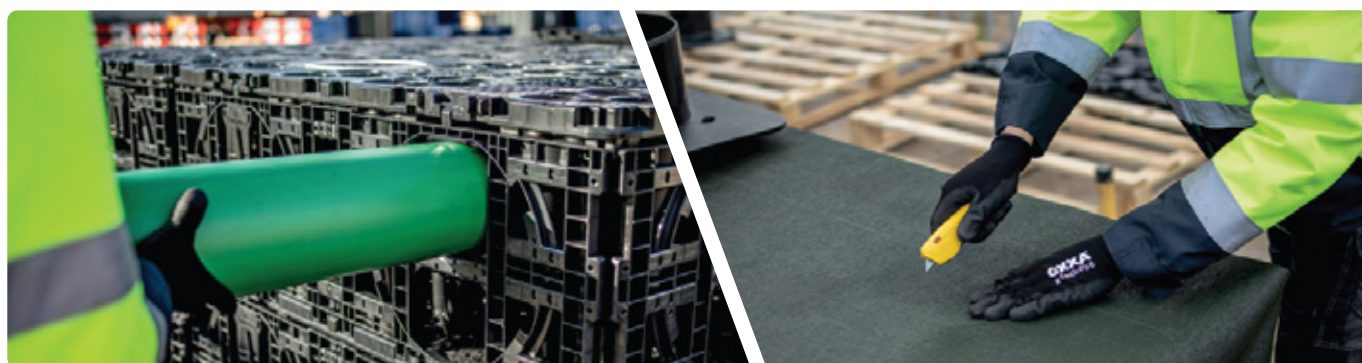

- Base unit
- Bottom and Side panels
- Shaft connector
- Spigot plate

Pieces fit together like Lego

Installation is simple just slide and click into place, scan to check out the 'how to' video. The base unit has a white ring on top which is used for the visual orientation of the product.

It is important to line up the position of the white rings to correspond with the unit below, once lined up the pieces will just fall into each other as they are stacked on the pallet. Once stacked on a pallet, system can easily be moved around site or into position by fork or slung in by crane. Wavin AquaCell is covered in a geomembrane seal, which is protected by a geotextile upon completion.

- Modular setup creates flexibility in choosing the inlet and outlet positions
- Light weight products, base unit weighs in at 11.4kg
- Ergonomic handgrips for easy handling
