MFV MODEL

The frames of the sanitary structures are made entirely of galvanized steel and incorporates a rapid anchor system that, by means of a lever, allows it to be positioned simply and rapidly and then adjusted in height.

WE ARE BIM READY

The modelling process that allows the improvement of planning, design, construction and the management of buildings, concurring with the transition of the industry toward the digital representation of buildings.

"BIM oriented" planning offers extraordinary competitive advantages: greater efficiency and productivity, fewer errors, less downtime, lower costs, enhanced interoperability, maximum sharing of information, a more punctual and coherent supervision of the project.

We achieve this by creating a series of Revit applications and models designed for simple and fast use.

* Example Revit 3D renders
